

# Year 2

**Additive Fluency 2 – Numbers within 20**

**Week 3**

# Number of the week... 19!

Notes for teachers in school or at home:

- This week is about learning the number 19 really well.
- Understand how 19 relates to 20.
- Know number bonds to 19 need a 2-digit plus a 1-digit number. You cannot make 19 by adding two single digits.
- Know number bonds to 9 and number bonds to 19. For example,

$$9 = 3 + 6 \dots$$

$$19 = 13 + 6,$$

$$19 = 3 + 16.$$

# Odd ones out?

Which patterns  
show 19?

How would you  
change the others  
to make 19?

Use dice,  
dominoes, cards  
or dotty patterns to  
make 19 in  
different ways.

Invent some  
drumming or  
clapping patterns  
with 20 beats.

# Count up and down

Make a dot-to-dot pattern from 0 up to 19

Invent a dance or exercise routine or with 19 moves!

Do hops safely.

Count up to 19,  
then back down  
again.

Is 19 odd or even?

How do you know?

# If I know ...

$$20 = 15 + 5$$

$$19 = \square + \square$$

$$20 = 16 + 4$$

$$19 = \square + \square$$

$$20 = 18 + 2$$

$$19 = \square + \square$$

Change one of the dice to make 19.

How many different number bonds can you make for 19?

# Use what you know...

Use what you know  
about the number 9  
to know number  
bonds to 19.

$$19 = 10 + 8 + \text{blue circle}$$

$$19 = 10 + 2 + \text{cloud}$$

$$19 = 10 + 3 + \text{yellow star}$$

$$19 = 10 + \text{black diamond} + 5$$

$$19 = 10 + \text{blue inverted triangle} + 4$$

$$19 = \text{red heart} + 6 + 10$$

# Number friends

Hmm. This is a long way from 19. I must have to subtract a big number like ...

What do you subtract from 19 to find the mystery numbers?

I know 1 less than 19 is ...

Can you add two single digits to make 19? Why, or why not?

# This week we learned...

- 1) If we know bonds to 20, we can work out bonds to 19
- 2) If we know 9, we know 19.

- 3) You need a 2-digit and a 1-digit number to make 19.

Well done! See you next week.
